# Protection

Your PC is being scanned...

Detected issues  
No issues

Quarantine  
No items

Protection exclusions  
No items

Disable protection temporarily or permanently

Pause protection

OverviewActivity

155,739 files  
Checked for 7 days

155,739 files  
Checked today

Active Protection

Continuous protection that checks every file you interact with and saves your PC in the background mode from:

Ransomware attacks

Malicious files

Illicit cryptomining

Malicious websites

Antivirus scan

On-demand protection that checks your PC for malware. When the scan is finished, you will get the report.

Scanning...1h 57m remaining

C:\Windows\WinSxS\amd64\_networki...ne\_0ed288147d132923\MPSSVC.dll

Vulnerability assessment

Advanced

Anti-ransomware Protection

Runs in the background and blocks the latest ransomware processes while you continue working as usual.

Automatically recover files after blocking a process

Protect backup files from ransomware

Protect network shares and NAS:

Recover affected files from network shares and NAS after blocking a process to:  
C:\ProgramData\Acronis\Restored Network Files

Change

Reset to default location

Protect your computer from illicit cryptomining

Real-time Protection

Provides continuous protection from potentially harmful files and processes in the background mode

Real-time Protection mode:

Smart on-access

Monitors all system activities and automatically scans files when they are accessed.

Action on detection:

Quarantine

Detect malicious behavior in processes

Detect and prevent malicious processes from exploiting the software vulnerabilities on a system (experimental)

Web filtering

Protects machines from malware and phishing coming from the Internet by blocking the access to the malicious content.

Action on malicious URL detection:

☒

Do not scan archive files larger than

10

MB

☒

Scan external drives

☐

Scan network shares and NAS

☒

Scan only new and changed files

☐

Run missed tasks at the startup

☒

Prevent the sleep or hibernate mode

☒

Give priority to other applications

The antivirus scan priority decreases if a CPU is overloaded. In this case, the scanning process takes more time.
